Contents

1 Introduction

This document demonstrates the comprehensive multilingual capabilities of OmniLaTeX. The system supports multiple languages including English, German, French, Spanish, Italian, and Portuguese, ensuring proper typography and hyphenation for each language.
All text demonstrates font coverage and proper character rendering using the Libertinus Serif font family, which provides excellent support for European languages and special characters.

2 Deutsche Übersetzung

Dies ist ein deutscher Text, der die Fähigkeiten des OmniLaTeX-Systems zur Verarbeitung mehrerer Sprachen demonstriert. Das System verwendet Babel für die korrekte Silbentrennung und Typografie.

Deutsche Texte erfordern spezielle Zeichen wie Umlaute (ä, ö, ü) und das Eszett (ß). Diese Zeichen werden korrekt von der Libertinus-Schriftfamilie unterstützt.

3 Traduction française

Ce document illustre les capacités multilingues d'OmniLaTeX. Le système supporte le français avec les caractères accentués appropriés (à, â, é, è, ê, ë, î, ï, ô, ù, û, ü, ÿ) et la typographie française correcte.

La magnifique typographie de la Libertinus Serif assure une lecture parfaite de tous les textes multilingues dans ce document d'exemple.

4 Traducción española

Este documento demuestra las capacidades multilingües del sistema OmniLaTeX. El español incluye caracteres especiales como la ñ y los acentos (á, é, í, ó, ú), que son correctamente renderizados con la familia tipográfica Libertinus.

El soporte tipográfico completo garantiza que todos los idiomas europeos se vean perfectos en cualquier documento generado con OmniLaTeX.

5 Traduzione italiana

Questo documento dimostra le capacità multilingue del sistema OmniLaTeX. La lingua italiana utilizza caratteri accentati (à, è, é, ì, í, î, ò, ó, ù, ú, û, ü) che vengono correttamente supportati dal font Libertinus Serif.

L'eccellente supporto tipografico assicura che tutti i testi multilingue siano perfettamente leggibili e esteticamente gradevoli.

6 Tradução portuguesa

Este documento demonstra as capacidades multilingues do sistema OmniLaTeX. O português inclui caracteres especiais como a cedilha (ç) e acentos (á, à, â, ã, é, ê, í, ó, ô, õ, ú, û) que são corretamente renderizados.

O suporte tipográfico completo da família Libertinus garante uma apresentação perfeita para todos os idiomas supported.

7 Mixed Language Content

This section demonstrates mixing languages within the same document. For example, we can discuss *la typographie française* and *deutsche Silbentrennung* in the same paragraph. Esto demuestra la flexibilidad del sistema OmniLaTeX per la gestione de múltiplos idiomas in a single document.

8 Mathematical Content

Mathematics transcends language barriers. The formula for the area of a circle remains universal: $A = \pi r^2$. However, we can provide examples in different languages:

$$\text{Fläche des Kreises: } A = \pi r^2 \tag{1}$$

$$\text{Aire du cercle :} \quad A = \pi r^2 \tag{2}$$

$$\text{Área del círculo:} \quad A = \pi r^2 \tag{3}$$

$$\text{Area del cerchio:} \quad A = \pi r^2 \tag{4}$$

$$\text{Área do círculo:} \quad A = \pi r^2 \tag{5}$$

9 Bibliography

This document demonstrates font coverage for multiple languages. The bibliography system properly handles international characters and provides appropriate sorting according to language-specific rules.
