Introduction

Background

- Prior work established baseline performance
- Gap identified in multi-modal approaches
- This work addresses scalability

*block*Research Question How can we improve throughput while maintaining accuracy?

Methodology

Approach

- 1. Data collection and preprocessing
- 2. Model architecture design
- 3. Training and evaluation

Key Insight

The proposed method reduces latency by 40% with no accuracy loss.

Results

Table 1: Performance Comparison.

Method	Accuracy (%)	Latency (ms)
Baseline	92.1	150
Proposed	93.3	90

Conclusion

Summary

- Proposed method achieves state-of-the-art results
- 40% latency reduction with maintained accuracy
- Future work: extend to streaming applications

Next Steps

Open-source release and benchmark integration.
